Terms and Conditions of Sale

- All prices are subject to change without notice.
- A \$25.00 minim order is required.
- Prices are FOB Hackensack, NJ unless otherwise specified.
- Terms Net 30.

Warranties:

- **Labels** All Labels sold by MedVantage come with a 100% user satisfaction guaranteed. This represents that the labels will work to the expectations of our customers based on the defined criteria of the product ordered; such as dispensing, label adhesion, material, scanning requirements, etc. Product that does not meet the requirements of the order will be 100% refunded.

MedVantage will not be responsible for labels that are not stored properly (a cool dry area), or where label specifications have changed after the order was shipped or stocked, or where defective equipment used in conjunction with the label is the cause.
- **Label Guns** All label guns come with a complete warranty for the life of the label gun provided that the labels and accessories being used are currently purchased from MedVantage. This covers normal “wear and tear” of the equipment and does not cover damage caused by abuse or misuse.
- **Electronic Products** All electronic products are covered by existing manufacturer warranties. Please check on the current program for your product and what special programs may be offered by MedVantage.

Return Policy:

- All returns must be approved by the corporate office, 800-743-5078, and an “RMA” number must be issued and accompany the returned merchandise.
- Should any MedVantage labels prove to be defective, a claim must be placed within 60 days. Products shown to be defective will be replaced.
- No return on stock items will be accepted after 60 days.
- Custom orders may not be returned.
- A re-stocking fee of 20% may be applied for non-defective items.

Order Definitions & Shipping Criteria: Products normally shipped UPS Ground. The below time periods represent approximate times for product leaving warehouse.

- **Stock** 1 –2 Days Products in current inventory.
- **Non-Stock** 2 – 10 Days Products may not be in inventory but readily available. Stocked in another location or easy to produce.
- **Custom** 2 – 4 Weeks Requires Quote
Products not in inventory and generally not readily available. These items are volume/price sensitive and require custom quoting due to size, material, adhesive, label die cut or perforation requirements.
- **Special Custom** 1 – 4 Weeks Requires Quote
Products which we currently carry or may have carried for other customers. They are custom by definition and must be quoted based on volume. Shipping is based on existing inventory and existing stocking customer needs.

Material Definitions

Labels: These are general categories of materials for labels. Additional “specialty” materials are available.

- **Litho** A low cost paper material used commonly for general purpose labeling.
- **Latex Impregnated** A paper material mixed with latex to give the label added flexibility. This works well on curved surfaces such as test tubes and helps to eliminate the ends lifting.
- **Direct Thermal** A paper facestock with a special coating that produces an image when subjected to heat from a thermal printer. The image will fade over time depending on storage conditions. If material is exposed to direct sunlight or heat, the image will fade more rapidly. Typical applications are laboratory test and patient charge labeling.
- **Direct Thermal Synthetic** Same imaging qualities as Direct Thermal but with a vinyl base material, which is difficult to tear. A durable material that also works well in areas where heat and moisture may be found. Used mostly in laboratory test and warehouse shelf labeling.
- **Direct Thermal Infrared** Same imaging qualities as Direct Thermal but specially coated to make barcodes readable by infrared scanners typically found in laboratory test analyzers. The scanners are designed to read through labels that may have come in contact with fluid. (Also available as “Near Infrared” which is less expensive.)
- **Thermal Transfer** A coated paper that accepts the ink from a ribbon in a thermal printer. Used where there is a need for a high readability rate of bar coding or where the label must be legible for a long period.
- **Polyester** Top coated polyester film with permanent acrylic adhesive. Used in applications where a harsh environment exists.

Thermal Transfer Ribbons: This represents the general categories of ribbon specifications. Other midrange combinations available.

- **Soft Wax** Cost effective but may smear if rubbed.
- **Hard Wax** Cost effective with a degree of stability against rubbing/smearing.
- **Resin** Impermeable to smudging or smearing.

Adhesive: This information should be used for guideline purposes only. All adhesives should be tested first to insure compatibility with the application. Labels should be stored in a cool dry place

- **Permanent** Rubber-based adhesive with high initial tack. Versatile at room temperature with excellent adhesion on dry surfaces. Generally the label can not be removed without destroying the label or leaving a residue. Used commonly in Radiology and Central Supply.
- **Glove** Acrylic based adhesive designed not to adhere to gloves on incidental contact, but adheres well on test tubes and slides. Used mostly in laboratory test applications.
- **Autoclavable** Acrylic solvent base adhesive used commonly where the label is going to be exposed to high temperatures such as sterilization processing. A strong initial tack that becomes stronger after exposed to temperature.
- **Removable** Mild adhesive used where the label needs to be removed without leaving glue residue or tearing the material to which it was applied. Label has a tendency to become stronger after a few days and it is recommended that it be tested by the end user.
